

Hoover Happenings

For the week of 5/13/24

Mrs. Suder's Third Grade Class!

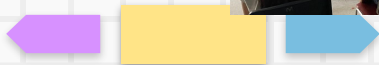

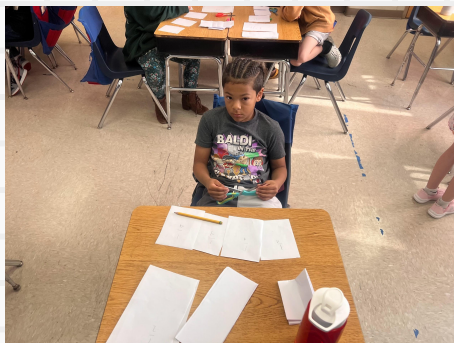

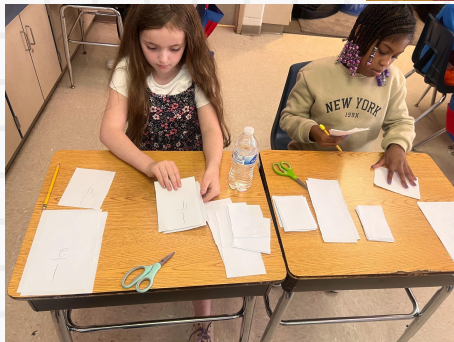

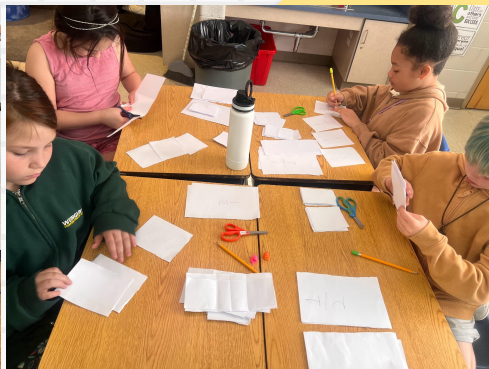

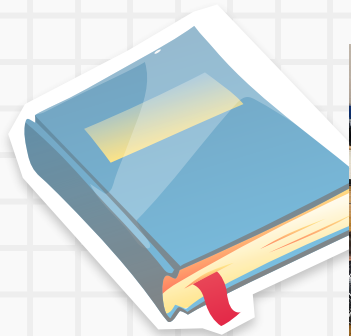

In math, students had some fun with our introduction to fractions activity.

In ELA, we are doing lots of research on Marine Life. Students have chosen an animal they would like to become an expert on and are making great progress with their notetaking.

We had a great Career Day, where students were able to learn about several different careers of their choice by exploring short videos on Xello. We were also very lucky to have some wonderful presenters share their careers about being a police officer and working as a technology director within the school district.

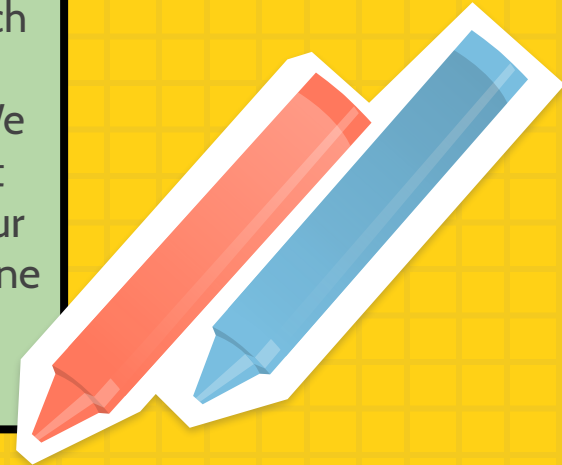

Mrs. Parmelee's Third Grade Class

This week we had Career Day and got to learn about working in tech and as a police officer. We had a lot of good questions for the community members who came in and talked about their work! We also made rain gauges so we can track rainfall amounts throughout the spring and summer. This activity had good connections with our math unit, fractions, because this week we looked at the number line model of fractions, which looks like a ruler, which we used to add measurements to our rain gauges!

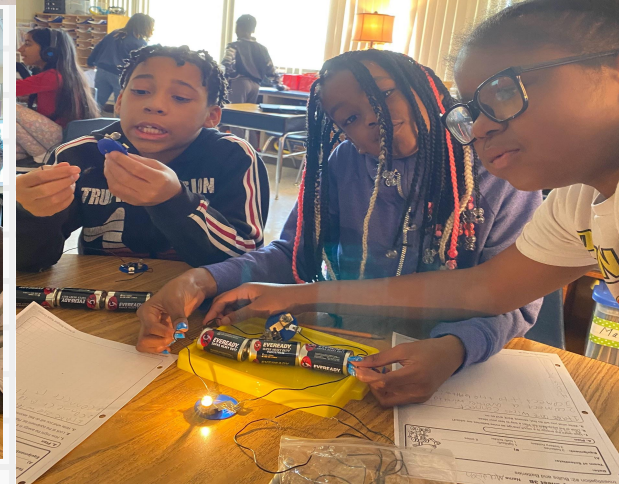

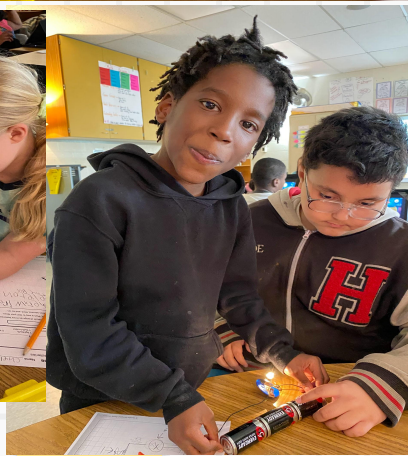

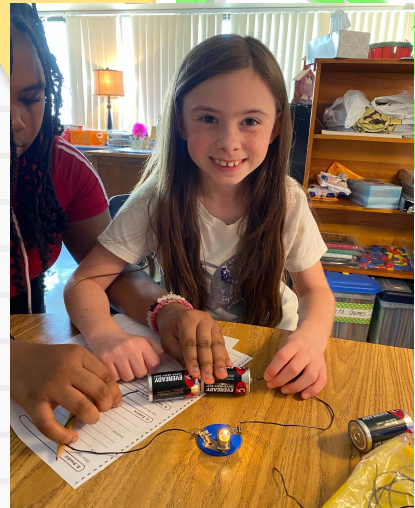

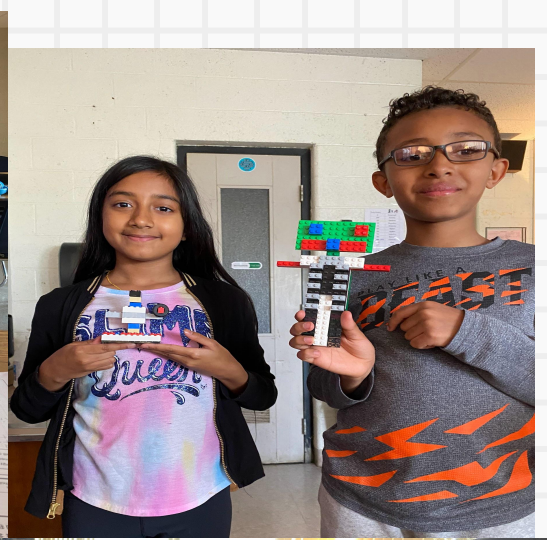

Mrs. Houston's Fourth Grade Class

We finally got a chance to build some circuits this week in science. While one group was busy constructing lego robots, another one was fixing a virtual circuit, and the last group got to design, build and test a real one! Check out these bright bulbs!

Ms. Johnson's Fourth Grade Class

Our Field Trip to Bald Mountain was
AMAZING!!!!
